INTRODUCTION

In a world where time is precious,We all know how frustrating government offices can be long lines, missing documents, and not knowing where to go. Our platform makes it simple by telling you exactly what to bring, where to go, and how much it'll cost before you even step in.
No confusion. No wasted trips. Just walk in prepared and get things done.

Skip the lines. Go online.

LITERATURE REVIEW

Most government services currently provide only general information about procedures, often through notices or basic websites. However, they do not clearly guide users on exactly what documents are required, where to go inside offices, or the full cost of each step.

Because of this lack of clear and structured information, people often face confusion, delays, and repeated visits. This shows a clear gap for a simple platform that gives complete, step-by-step guidance in one place.

OBJECTIVES

- *Help Users Come Fully Prepared*
- *Reduce Application Mistakes*
- *Increase Financial Transparency*
- *(Clearly display all fees, charges, and costs involved in services to avoid confusion or hidden expenses.)*
- *Provide digital guidance for government processes*

METHODOLOGY

RESEARCH

ANALYZE COMMON PROBLEMS PEOPLE FACE WHEN ACCESSING GOVERNMENT SERVICES (LACK OF INFORMATION, CONFUSION IN PROCESSES

PLANNING

IDENTIFY AND PRIORITIZE CORE FEATURES LIKE OFFICE LOCATOR, DOCUMENT REQUIREMENTS, AND FORM ASSISTANCE

DEPLOYMENT

LAUNCH THE APPLICATION ON A WEB PLATFORM FOR PUBLIC ACCESS

DESIGN

CREATE A SIMPLE, USER-FRIENDLY INTERFACE WITH CLEAR NAVIGATION AND EASY-TO-UNDERSTAND STEPS

TESTING

CONDUCT USABILITY TESTING, FIX BUGS, AND VERIFY ACCURACY OF INFORMATION

MAINTENANCE

REGULARLY UPDATE DATA, IMPROVE FEATURES, AND ADAPT BASED ON USER FEEDBACK

FEASIBILITY ANALYSIS

Technical Feasibility

Built using HTML, CSS, JavaScript, and backend tools. Core features are achievable, but crowd tracking will use estimations due to lack of real data.

Economic Feasibility

Low cost to develop and maintain. Saves user time, cost, and reduces errors.

Operational Feasibility

Easy to use and solves common confusion. Main challenge is keeping information updated.

FEASIBILITY ANALYSIS

Legal Feasibility

Informational only, not an official system. Disclaimer required.

Social Feasibility

Helps users prepare better and improves transparency. Adoption may take time

FUNCTIONS

- *Service Search*

Choose what you need (e.g., license, passport) and get instant guidance.

Document Checklist

- *Simple list of required documents with a checklist.*
- *Clear instructions on which room number /office to go to next.*

Shows how busy the office is (low/medium/high + best time). Location-Based Info

- *Guides on how to fill each form by removing Common mistakes.*

TECHNOLOGY STACK

- **Frontend:** HTML, CSS, JavaScript – for user interface and interaction
- **Backend:** Java / Node.js – for application logic and request handling
- **Database: MySQL** – for storing user and service information
- **Network (Local Setup):** LAN/WAN – for local access, testing, and team collaboration

Conclusion

Our project simplifies access to government services by providing office locations, required documents, and step-by-step guidance in one place. It reduces confusion, saves time, and makes the process easier for citizens. While some digital services already exist, our app focuses on making information clearer and more user-friendly.
