

GOVERNMENT SEWA

presenters

Yashaswi Giri, Prekshya Koirala, Grishma Paudel

In a world where time is precious, We all know how frustrating government offices can be long lines, missing documents, and not knowing where to go. Our platform makes it simple by telling you exactly what to bring, where to go, and how much it'll cost before you even step in.

No confusion. No wasted trips. Just walk in prepared and get things done.

Technology Stack

- Frontend: HTML, CSS, JavaScript – for user interface and interaction
- Backend: Java / Node.js – for application logic and request handling
- Database: MySQL – for storing user and service information
- Network (Local Setup): LAN/WAN – for local access, testing, and team collaboration

Objectives

- Help Users Come Fully Prepared
- Reduce Application Mistakes
- Increase Financial Transparency
- (Clearly display all fees, charges, and costs involved in services to avoid confusion or hidden expenses.)
- Provide digital guidance for government processes

Key Features

- Service Search
- Simple list of required documents with a checklist.
- Clear instructions on which room number /office to go to next.
- Shows how busy the office is (low/medium/high + best time). Location-Based Info
- Guides on how to fill each form by removing Common mistakes.

- **Technical Feasibility**

Built using HTML, CSS, JavaScript, and backend tools. Core features are achievable, but crowd tracking will use estimations due to lack of real data.

- **Economic Feasibility**

Low cost to develop and maintain.
Saves user time, cost,
and reduces errors.

- **Social Feasibility**

Helps users prepare better
and improves
transparency.

- **Operation Feasibility**

Easy to use and solves common confusion. Main challenge is keeping information updated.

- **Legal Feasibility**

Informational only, not an official system.
Disclaimer required.

GANTT CHART

- Government procedures are often unclear to citizens.
- Pre-visit info reduces delays and repeat trips.
- A simple platform can prepare users in advance.

- Identify common problems faced by people in accessing government services
- Gather requirements based on user needs (documents, office location, guidance)
- Plan and design a simple and user-friendly system
- Develop the web application with necessary features
- Organize information in a clear and structured format

Conclusion

Our project simplifies access to government services by providing office locations, required documents, and step-by-step guidance in one place. It reduces confusion, saves time, and makes the process easier for citizens. While some digital services already exist, our app focuses on making information clearer and more user-friendly.
